

Dr. J. Andrew Jones
Assistant Professor in Chemical, Paper, and Biomedical Engineering
Miami University
Oxford, OH

Friday 11/17/17

Where: SSOE Seminar Room, 1027 Nitschke Hall

Time: 11:30 am - 12:30 pm

Fermentation-based chemical production strategies provide a feasible route for the rapid, safe, and sustainable production of a wide variety of important chemical products, ranging from fuels to pharmaceuticals. Currently, these strategies have failed to obtain wide industrial utilization due to their inability to economically compete with traditional extraction and chemical production methods.
